Also I don't think I can give feedback with only the video

I would need the code and a demo for this

Me

Mar 08, 6:07 AM

The video was just to show the current progress. I will share a demo version soon so you can test it properly, and then I can provide the code as well.

fafaselecto16

Mar 08, 5:57 PM

Great news sir

fafaselecto16

Mar 08, 5:57 PM

Glad we're progressing!!

Me

Mar 08, 6:24 PM

Thank you.

Me

Mar 09, 9:37 AM

Hello, fafaselecto.

I hope this message finds you well.

Thank you for taking your valuable time to watch the video we shared about the significant progress of the current phase, and we are grateful to you that you have shared your crucial insights.

The reason was to record the video so that we can present to you that every functionality we have implemented is working well from our end.

Thanks once again for sharing your concern regarding this update. Very soon we will share the backend server (without frontend integration done yet) so that you can test it by your side and share with us your valuable insights on the progress.

Thanks for your trust and cooperation with us. We look forward to building a strong relationship with you.

fafaselecto16

Mar 10, 3:30 AM

Great! can't wait to see what you are building

fafaselecto16

Mar 10, 3:30 AM

dont hesitate

fafaselecto16

Mar 10, 3:30 AM

have you reviewed the code i created to generate the cv ?

Me

Mar 10, 3:36 AM

Yes, I've reviewed your CV generation code. Looks good so far—will share feedback as we progress.

Me

Mar 10, 10:55 AM

Hello fafaselecto,

I hope this message finds you well.

We are pleased to inform you that the backend has been successfully hosted in the cloud and all endpoints are now accessible for testing from your end. We kindly invite you to test the system and share your valuable feedback. Please don't hesitate to let us know if you have any suggestions or require modifications as we are actively working on refining the system. Once we receive your input we will promptly address it and reach out to you for a second round of testing.

On the development front, we have made significant progress on the backend (API) and have already begun integrating it with the frontend. The following functionalities have been implemented to date (API only):

- User Registration
- Login
- CV Generation (powered by AI via OpenAI, with PDF/DOCX export)
- Dual-language cover letters (English and French)
- Human review flow, including admin and tutor dashboards
- Full Stripe payment system (Stripe/Premium monthly subscriptions + Ultimate one-time payment)
- Admin and Webhook integrations

For your convenience, I've set up a temporary ngrok server to make API testing seamless:

- Base URL: <https://impersonal-rubbisy-jacinta.ngrok-free.dev/>
- Swagger Documentation (API Docs): <https://impersonal-rubbisy-jacinta.ngrok-free.dev/docs/#/>

We would greatly appreciate your insights after testing. Please feel free to share any concerns or suggestions you may have, your feedback is invaluable in helping us enhance the system to better meet your expectations.

Thank you for your trust and collaboration. We look forward to hearing from you.

Me

Mar 11, 7:23 PM

Hello fafaselecto,

I hope you are doing well.

I just wanted to kindly follow up regarding the update I shared earlier about the backend development and API testing. I wanted to check if you have had a chance to review or test the system yet.

Whenever you have a moment, please take a closer look and verify if it meets your vision. We would truly appreciate your feedback. Your input will help us ensure everything works according to your expectations and allow us to proceed with the next improvements.

If you need any assistance during testing or have any questions, please don't hesitate to share with us. We will be happy to help you anytime.

Looking forward to hearing from you.

Thanks for your trust and cooperation.

Mar 12, 1:23 AM

i have errors

fafaselecto16

Mar 12, 1:23 AM

— CV Generation (powered by AI via OpenAI, with PDF/DOCX export) -> for this we spoke about anthropic ? and which api key did you put ?

Me

Mar 12, 1:25 AM

For CV generation, I used the OpenAI API key for testing. We can switch to Anthropic if you provide the API key.

Can you share the specific errors you're seeing so I can fix them?

fafaselecto16

Mar 12, 1:28 AM

I can't access your link brother

fafaselecto16

Mar 12, 1:28 AM

So no review

Look

Me

Mar 12, 1:32 AM

Brother, At this time and midnight here I will take a look and share with you an update shortly.

fafaselecto16

Mar 12, 1:33 AM

Ok no problem tell me ! I will try to transfer my current code to anthropic to check on the quality

Me

Mar 12, 1:44 AM

Thanks for your understanding.

Me

Mar 12, 10:34 PM

Hello fafaselecto,

I just wanted to give you a quick update regarding the project. Previously, I had hosted it on Ngrok for testing, but unfortunately my PC went offline, so the server stopped. So, could you please consider to test API at your earliest convenience. it would be better if you can consider to test the functionality within 4 hours. within 4 hours we will assure to the server will be stay online.

API docs: <https://impersonal-rubbisy-jacinta.ngrok-free.dev/docs/#/>

Thanks for your patience and understanding.

We look forward to your response.

fafaselecto16

Mar 13, 12:47 AM

Hello sir I will review in an hour

fafaselecto16

Mar 13, 12:48 AM

Can you send the zip file if it gets disconnected

Me

Mar 13, 12:51 AM

Yes, sure. If the connection gets disconnected, I will send you the ZIP file so you can test it locally as well. Just let me know.

fafaselecto16

Mar 13, 3:16 AM

Hi,

Thanks for sending the API documentation link. I've reviewed the Swagger docs and the API structure looks good overall - I can see the endpoints are well organized (auth, CV management, subscriptions, admin panel, etc.).

However, I need to clarify something: the Swagger documentation only shows the API endpoints, not the actual source code. To properly review your work, I need access to the codebase itself.

Could you please provide:

- Access to the Git repository (GitHub/GitLab/Bitbucket), OR
- A ZIP file of the complete backend project

Once I have the code, I'll be reviewing:

- Code structure and organization
- Security implementation (password hashing, JWT expiration, input validation)
- Error handling
- Database models and migrations
- Test coverage (unit tests, integration tests)
- Environment configuration and secrets management
- Dependencies and their versions

A few questions in the meantime:

- What hashing algorithm are you using for passwords? (bcrypt, argon2?)
- How long before JWT tokens expire?
- Is the Stripe webhook signature being verified?
- Is there rate limiting on sensitive endpoints (login, OTP, password reset)?
- Are there automated tests? If so, what's the coverage?

I noticed some typos in the routes (/forgotforgot_pass, /forgotupdate_password_without_token) - are these intentional or will they be fixed?

Please send me the source code so I can complete the review.

Thanks!

Me

Mar 13, 3:29 AM

Please send me the source code so I can complete the review.

Thanks!

Me

Mar 13, 3:29 AM

Let me have a look and discuss with my team
